Ultra has been supplying natural raw glandulars to the Natural Food Industry, Naturopaths, Chiropractors and Medical Doctors for twenty five years. Ultra Enterprises have become a recognized leader in glandular therapy throughout the United States, Canada, Europe and other parts of the world.

All glandulars are from the high mountains of New Zealand and the ranges of Argentina. These range free bovine glandulars are guaranteed to be free of hormones, growth stimulants, e-coli, fungus, pathogens, moisture, mold, stilbestrol, growth stimulants, antibiotics and any other artificial methods. Ultra uses only the finest, purest and safest raw materials available freeze dried, defatted, uncut, 100% pure and BSE FREE.

“There are no purer glandulars on this earth”

Ultra’s products has been formulated to meet Dietary Supplement Health and Education Act (DSHEA) and the U.S. Pharmacopia. “Manufactured under the guide lines of GMP”

Each soft-gelatin, water soluble capsule contains 550 mg. of raw liquid liver fractions from Argentina defatted, uncut 100% pure and BSE FREE. This is equivalent to 11,000 mg. of raw liquid liver in free form, supplying 100 mcg. of vitamin B12. This has been combined with 500mg. of liquid Siberian Ginseng (Eleutherococcus Senticosus), from Ginseng Extract, for major support. No other ingredients have been added.

Raw liquid liver extract is by far the most potent of all liver supplements. It is a superb source of iron necessary for the production of hemoglobin, a major protein found in red blood cells. Raw liquid liver extract contains high amounts of B-12, vital to the production of red blood cells in the bone marrow and the health of the central nervous system. Raw liquid liver extract is water soluble, fat and cholesterol free, encapsulated in its free form for optimum utilization. This anti-fatigue combination is a vigorous blood builder that contributes enormously to energy production. It is used by children, on-the-go professionals, homemakers, senior citizens and the physically challenged and it is 100% pure.

Raw liquid liver extract in this product is:

Freeze dried, defatted, uncut, 100% pure, and BSE FREE from Argentina

One Kit consisting of one bottle each Anabolic II, Megabolic II, Liquid Liver Extract The Foundation Kit was designed for those individuals, interested in muscular development and growth. Over the years it has prove to be a safe and effective way to gain muscle density, strength, and size without the use of harmful steroids.

Glandulars are freeze dried defatted, uncut, 100% pure and BSE FREE from New Zealand / Argentina.

One of our many satisfied customer is the exciting Ivan Dahl Mr. New York City 1985. Ivan has won first place in five different bodybuilding contest, including Today's Physique Classic. Hear what he has to say...

"I've competed eleven times in bodybuilding and follow what I call The Formula for Success: Extend yourself, go the extra mile only winners travel! Your products, like Fat Grabber II and Liquid Liver Extract, make that mile easier to travel, and it all comes together much more quickly when I use them. Thank You",  **Ivan Dahl**

Sandy Smith was the winner of the 1988 World Classic Bodybuilding Championship in San Antonio, Texas. Sandy had tried several different lines of vitamins only to discover that they did not live up to their expectations...until she was introduced to Ultra line. At that time Sandy was a 41-year young energetic mother of four children, though the routine use of Ultra's Foundation Kit during her competition workouts, won first place in the 1988 World Classic Bodybuilding Championship Master's in San Antonio, Texas. She was so impressed by her results using the Ultra line that she wrote us saying: "To my amazement, my final weeks of training were unbelievable. Not only did I maintain my strength, but in some areas my strength actually increased even during the last week!" "I honestly believe Ultra's Foundation Kit made a big difference in my appearance. The end result was bringing home first place." "Dedication, hard work and Ultra's line of products can lead you on your way to becoming a champion, too."  **Sandy Smith**

**DIBENCOZIDE -PLUS**

UE 505  UPC 0 43292 56197  
Serving Size: 15 Drops  **Daily Value Not Established**

2oz. Bottle  %DV

Dibencoside  5 mg.  **

Ferulic Acid  50 mg.  **

Dibencoside, the active form of vitamin B-12 has been used in the development of muscular growth, and repair, when used with other muscular development products.

Ferulic Acid is the active ingredient of Gamma Oryzanol. When it is in its isolated form it is three timesmore potent than its original form. The addition of Ferulic Acid supports the effectiveness of Dibencozid, making it a multi-purpose product.

The Food And Drug Administration has not evaluated these statements.

SMILAX OFFICINALIS
UE 501  UPC 0 43292 56029
Serving Size: 30 Drops
** Daily Value Not Established

Amount Per 30 Drops

2oz Bottle

Smilax  ½ Teaspoon (approximately 15 drops)  **

This careful preparation of Smilax has been concentrated to 4X that is four times more than its original form. It has been known to increase and maintain certain energy levels.

Smilax Officinalis is the technical name for the herb sarsaparilla. This especially chosen variety comes from Central America and is very highly biological available. It is widely known as a blood purifier, increases energy, and regulates hormones.

It has the ability to raise testosterone levels, for this particular supplement smilax has been concentrated to 4X that is four times more potent than its original form for maximum results.

This careful preparation gives sarsaparilla the anabolic potential to help in the development of dense muscle mass and increasing energy level. It is also useful for frigidity, hives, impotence, infertility, premenstrual syndrome and nervous disorders.

These statements have not been evaluated by the Food And Drug Administration.

This product is not intended to diagnose, treat, cure, or prevent any disease.

FAT GRABBER II
UE 205  UPC 0 43292 55934
Serving Size I Tablet  ** Daily Value Not Established

Amount Per Tablet  %DV

Vitamin C (as ascorbic acid).................................50 mg........................83%
Vitamin B-6 (from pyridoxine hydrochloride)...........25 mg........................1,250%
Chromium (from chromium amino acid chelate).......100 mcg........................83%
Choline (from choline bitartrate)..........................250 mg........................*
Grapefruit (citrus paradisi).................................250 mg........................*
Vinegar (from apple cider).................................250 mg........................*
Inositol ..........................................................250 mg........................*
L-Methionine ...................................................175 mg........................*
L-Carnitine (from l-carnitine tartrate)....................25 mg........................*
Parsley Leaf (from petroselinum crispum).............25 mg........................*
Uva Ursi Leaf (arctostaphylos uva-ursi)...............25 mg........................*
Citrus Aurantium Extract (10% synephrine)...........25 mg........................*
Kelp (ascophyllum nodosum) ............................250 mcg........................*

** Daily Value Not Established
This formulation is used in support of the fat metabolism.

Vitamin C: antioxidant required for tissue growth and repair, reduces cholesterol levels.
Vitamin B-6: beneficial for water retention (relieving excess water), act as a mild diuretic absorption of fats proteins, maintains potassium/sodium balance and supportive cholesterol in balance.
Chromium: because it is involved in the metabolism of glucose it is sometimes called the glucose tolerance factor (GTF) is needed for energy, vital to the synthesis of cholesterol, fats, and protein, this essential mineral maintains stable blood sugar levels through proper insulin utilization.

Choline: proper nerve impulses, liver function and lecithin formation it minimizes excess fat and aids in fat/cholesterol metabolism.
Inositol: reduces cholesterol levels, important in the formation of lecithin, metabolism of fat/cholesterol, and helps remove fat from the liver.
L-Methionine: assists in the break-down of fats preventing buildup in the liver and arteries, powerful antioxidant, is required for the synthesis of nucleic acid, collagen, and proteins found in every cell of the body.
L-Carnitine: transports long-chain fatty acids, which are burned within the cells to provide energy, major source of energy for the muscles thus increases the use of fat as an energy source and prevents fatty buildup, lower triglyceride levels, aids in weight loss and improves muscle strength.

Grapefruit Powder: assists in the breaking down of fats.
**Fat Grabber II (continued)**

Serving Size 1 Tablet  **Daily Value Not Established**

Amount Per Tablet  %DV

Cider Vinegar: increases hydrochloric acid content, circulation and the breaking down of fats. Citrus Aurantium Extract: indirect-acting sympathomimetic compounds potenate the release of epinephrine and nor epinephrine at pre-synaptic sites in the sympathetic nervous system by acting at receptors, these catecholamines accelerate the removal of unwanted fat stores by increasing the rate of which fat is released from body (lipolysis), while simultaneously increasing the metabolic rate (thermogenesis). Buchu/Couch Grass/Corn Silk/Hydrangea/Uva Ursi/Juniper Berries/Parsley: reduction of excess water.

**Kelp:** necessary for maintaining normal metabolism in all cells of the body.

---

**RAW PROSTATE**

UE 407  UPC 0 43292 55931

Serving Size: 1 Tablet  **Daily Value not established**

Amount Per Tablet  %DV

Raw Prostate (bovine) Tissue  200 mg.  **

Freeze dried, defatted, uncut, 100% pure and BSE FREE from New Zealand.

The prostate is situated just below the bladder, encircling the urethra where it emits from the bladder. It influences lubrication of the spermatozoa and controls the discharge of seminal fluid during copulation, as well as regulating the urine discharge. Because the prostate is concerned with the manufacture of fluid in which the sperm cells float, removal of the gland results in sterility, even though it does not otherwise affect sexual powers of an individual. It is an important part of the reproductive system.

---

**RAW THYROID**

UE 409  UPC 0 43292 55938

Serving Size 1 Tablet  **Daily Value Not Established**

Amount Per Tablet  %DV

Raw Thyroid (bovine) Tissue (Thyroxin Free)  200 mg.  **

Freeze dried, defatted, uncut, 100% pure and BSE FREE from New Zealand.

The thyroid gland is one of the most significant of the endocrine glands which produces secretions that regulate many basic processes of the body. The thyroid gland lies in the front part of the throat along the windpipe. Its secretion thyroxin is involved in the process of oxidation which occurs within the cells and by which the tissues generate the energy they require. Its importance is indicated by the serious consequence of excessive or deficient amounts of it in the body.

Raw Thymus
UE 411  UPC 0 43292 55937
Serving Size: 1 Tablet
Amount Per Tablet  ** Daily Value Not Established
Raw Thymus (bovine)Tissue  200 mg.  **
Freeze dried, defatted, uncut, 100% pure and BSE FREE from New Zealand.

For a long time scientists knew little about the thymus gland, but now it is now known to be a essential to the body's defense mechanisms, it is located in the chest near the heart. The thymus gland plays a vital role in the immune system by producing antibodies. According to research the use of raw thymus tissue has demonstrated it's ability to strengthen and support the thymus, therefore increasing its ability to further strengthen the immune system and to protect the body against invading bacteria, fungi and other organisms.

Raw Lung
UE 415  UPC 0 43292 55920
Serving Size: 1 Tablet
Amount Per Tablet  ** Daily Value Not Established
Raw Lung (bovine) Tissue  200 mg.  **
Freeze dried, defatted, uncut, 100% pure and BSE FREE from New Zealand.

The primary function of the lungs is to supply oxygen to the red blood cells and eliminate carbon dioxide. In the rest of the body capillaries expand and throw off carbon dioxide. In the course of twenty-four hours of breathing an active man absorbs more than twenty cubic feet of oxygen, and his blood emits more than twenty cubic feet of carbon dioxide. Lungs normally take in air and expel waste products seventeen times a minute, and can speed up to seventy or eighty times a minute during extreme muscular effort or in pneumonia.

Raw Spleen
UE 413  UPC 0 43292 55921
Serving Size: 1 Tablet  ** Daily Value Not Established
Amount Per Tablet  Raw Spleen (bovine) Tissue  200 mg.  **
Freeze dried, defatted, uncut, 100% pure and BSE FREE from New Zealand.

The spleen is a large, ductless, gland-like organ which lies in the upper part of the abdomen. It has a blood-cleansing function, and a key participant in the formation of red blood cells. The spleen together with the thymus has been found to back up thyroid function. It is also thought the spleen cooperates with the pancreas and the stomach in producing an internal section which elaborates trypsin.

These statements have not been evaluated by the Food And Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.
The kidneys are a bean-shaped organ located high on the rear wall of the abdominal cavity. Their function is to eliminate wastesubstances from the blood through the formation of urine. Kidney; composed of thousands of minute tubes, known as the uriniferous tubul approximately seventy five miles. From each kidney springs a tube, the ureter, which carries the urine to the urinary bladder from there another tube arises, the urethra, by which the urine is voided. In their excretory function kidneys exercise a fine and selective discrimination. The miracle of this function goes something like this: The kidney excretes no glucose except that above the normal blood limit of 0.17%. It excretes only one-half of the urea and only as much NaCl as necessary to maintain the correct osmotic pressure of the blood even though both substances are highly soluble, diffusible and dialyzable. It can also differentiate between dissolved hemoglobin or egg albumin which are excreted and the plasma proteins which are normally not found in urine. The kidney also returns to the body some of the materials taken out by the filtration system. Like most glands, the kidneys are supplied with nerves; from the great sympathetic nerve, the splanchic branches proceed to the kidney.

**RAW HYPOTHALAMUS**

UE 421  UPC 0 43292 55922

Serving Size: 1 Tablet ** Daily Value Not Established

Amount Per Tablet **DV

Raw Hypothalamus (bovine) Tissue 200 mg. **

Freeze dried, defatted, uncut, 100% pure and BSE FREE from New Zealand.

The hypothalamus is the of brain concerned with many of the body’s autonomic function. It represents less than one percent of the brain mass and yet is the most important of all motor output pathways of the limbic system. Some of the functions of the hypothalamus are regulating heart rate, arterial pressure, body temperature, body fluid osmolarity, food intake and secretion of pituitary hormones. Some of the other characteristics of the hypothalamus is its involvement in behavior patterns such as anger, thirst and hunger, shivering, G.I. stimulation and body temperature regulation.

**RAW PINEAL**

UE 425  UPC 0 43292 55918

Serving Size: 1 Tablet ** Daily Value Not Established

Amount Per Tablet **DV

Raw Pineal (bovine) Tissue 10 mg **

Freeze dried, defatted, uncut, 100% pure and BSE FREE from Argetiona.

The pineal gland is considered vital to functioning of the endocrine system. It is also established that the pineal controls or influences the secretion of epinephrine, norepinephrine with secretions of melatonin and serotonin. It has also been associated that brain maturation, puberty, and menopause onset, as well as ovarian changes, which are also linked to the pineal gland. The most well acknowledged example of a hormone reaction is the inhibition of the pineal's secretion of melatonin by light impinging on the eye.

**RAW LYMPH**

UE 423  UPC 0 43092 55919

Serving Size: 1 Tablet ** Daily Value Not Established

Amount Per Tablet %DV

Raw Lymph (bovine) Tissue 200 mg. **

Freeze dried, defatted, uncut, 100% pure and BSE FREE from New Zealand.

The lymph glands are an interconnected series of glands, spaces and ducts. The lymph itself contains white blood cells which combat bacteria. The lymph glands filter out infectious material and other debris from the tissues and acts as the body’s defense against the spread of infection. Lymphatic tissue is also found in the digestive tract: and the lacteals, which absorb fat from digested food, of the small intestines are of the smallest form. The circulation of lymph does not depend on the action of the heart, but is accomplished by the movement of body muscles, such as in breathing and walking.

**RAW PANCREAS**

**UE 427**  
**UPC 0 43292 55925**

**Serving Size:** 1 Tablet

**Amount Per Tablet**

- **Raw Pancreas (bovine) Tissue:** 200 mg.

**%DV**

- **:** Daily Value Not Established

Freeze dried, defatted, uncult, 100% pure and BSE FREE from New Zealand.

The pancreas is a vital organ, ranking in importance with the liver. It is situated in the abdominal region, behind the stomach, close to the liver and gall bladder. It performs two distinct functions. The first is to secrete the pancreatic juice into the intestinal tract. This fluid is one of the chief chemical aids in digestion, containing certain enzymes essential in the digestion of starch, proteins, and fats. Second the pancreas acts as an endocrine gland, secreting insulin directly into the bloodstream. Insulin is valuable in the regulation of blood sugar levels and in the conversion of sugar into heat and energy. The pancreas has been implicated in hypo- and hyper-glycemia, hypoproteinemia, low blood gas, poor fat assimilation and general indigestion.

The incredible importance of proper pancreatic enzyme activity can be seen in the following exert of W.H. Philpott’s study done at the Clinical Ecology Foundation in Oklahoma City and submitted to the Society for Clinical Ecology in San Francisco, California on October 30, 1977.

**RAW UTERUS**

**UE 429**  
**UPC 0 43292 55948**

**Serving Size:** 1 Tablet

**Amount Per Tablet**

- **Raw Uterus (bovine) Tissue:** 200 mg.

**%DV**

- **:** Daily Value Not Established

Freeze dried, defatted, uncult, 100% pure and BSE FREE from New Zealand.

The uterus is a small pear-shaped organ in the female pelvis commonly known as the womb. The uterus is suspended in the pelvis by ligaments and opens into the vagina by means of the cervix, a small hollow fibrous tube like structure situated at the bottom of the uterus. Cervix is a protective passage which shields rest of the uterus, especially during pregnancy, at delivery it descends to permit expulsion of the fetus. It is a muscular organ, but its lining is a soft glandular material known as endometrium, bleeding at administration comes from this lining. Ovaries are near the uterus, on each side, but do not connect with it, eggs from the ovary reach the uterus by passing from the top through two arms like projections known as the fallopian or uterine like tubes.

**RAW OVARIAN**

**UE 431**  
**UPC 0 46292 55928**

**Serving Size:** 1 Tablet

**Amount Per Tablet**

- **Raw Ovarian (bovine) Tissue:** 200 mg.

**%DV**

- **:** Daily Value Not Established

Freeze dried, defatted, uncult, 100% pure and BSE FREE from New Zealand.

The ovaries are the two sex glands of women. They lie in the lower part of the abdomen and perform two essential functions; they germinate the reproductive or egg cells one of which passes through the fallopian tube to the uterus every month, and they supply internal secretions of hormones which influence most feminine characteristics and are related to the reproductive process. They are active from puberty to menopause, during which time they perform the function ovulation that produce these certain female characteristics. The early sexual development of girls is the result of rapid functional development of the ovaries or a hypo-function in the pinea gland. Ovaries are affected by the action of distant glands; a normal thyroid has much to do with the function of the ovaries. With a hypothyroid condition menstruation may not appear even though the ovaries and the uterus are normal.

**Raw Brain**

UE 433  UPC 0 43292 55949

Serving Size: 1 Tablet

Amount Per Tablet **%DV**

Raw Brain (bovine) Tissue 200 mg. **

Freeze dried, defatted, uncut, 100% pure and BSE FREE from New Zealand.

Brain is a large mass of nerve tissues contained in the skull, connected to the spinal cord, surrounded by three layers of tough membranes called the meninges. Brain cells, with the spinal cord, are interwoven into a complex relay system which collects, stores, and sends out sensations and information. Each area of the brain is responsible for the control of a particular part of the body, or a particular group of sensations or impulses, specialized receptor cells, collect data about our environment and feed the information to the central nervous system where it is quickly sorted out and filed or acted upon. The body has millions of pain, pressure and hearing receptors and each eye contains over 100 million light receptors. Add to these the taste, smell, sound, and other radar types of receptors feeding information along the nerve paths to the brain, which alone contains over 12 million nerve cells. Just within the cranial cavity and continuous with the spinal cord is the lower brain stem which controls the muscles and the sensory organs of the head. Above the lower brain stem is the part known as the midbrain where eye movements and a number of involuntary muscular reflexes are controlled. Cerebellum which is the second largest single section of the brain grows out behind the midbrain. Its function is to coordinate and integrate the action patterns throughout the nervous system, thus is responsible for smoothness of action. A disturbance in the cerebellum results in spastic, disjointed movements and a lack of muscular coordination. Hypothalamus is located directly above and in front of the midbrain. This group of cells regulates sexual functions, body temperature, sleeping, and aggression.

---

**Raw Stomach**

UE 435  UPC 0 43292 55951

Serving Size: 1 Tablet

Amount Per Tablet **%DV**

Raw Stomach (bovine) Tissue 200 mg. **

Freeze dried, defatted, uncut, 100% pure and BSE FREE from New Zealand.

Stomach, portion of the alimentary tract, the digestive tube, which extends from the lower end of the esophagus or gullet, the canal extending from the pharynx (throat) to the stomach, to the beginning of the duodenum or first part of the small intestine. The internal surface of the stomach contains the minute gastric glands which manufacture hydrochloric acid and certain ferments which digest food into simpler substances. The muscular walls grind and mix food with gastric juices. About every twenty seconds, a wave of contractions passes along the stomach from the upper part to the pylorus. Various congenital deformities may affect the stomach, such as enlargement of the muscle of the pyloric valve, gastropotomy or dropped stomach may occur later in life, inflammation of the lining of the stomach is a common disorder, occurring in various forms and at anytime throughout life. Peptic ulcers are another common disorder, resulting from action of the gastric juices on the stomach wall, an increase in the amount or concentration of gastric juice causes acidity and cigarette smoking particularly increase the acidity of the gastric juices. Ulcers may also be a source of discomfort and discomfort. Ulcers of the stomach may be multiple and are more apt to be located on the back wall of the stomach. Chlorophyll in water soluble form, Vitamin A and specific nucleo-proteins are most beneficial for relief. The GI (gastro intestinal) is frequently disturbed by ulcers, peptic ulcers, duodenum ulcers, colitis, spastic colitis and hyper acidity. Freeze-dried duodenal substance, cabbage powder or fresh raw cabbage juice and raw stomach substance can prove to be helpful.

These statements have not been evaluated by The Food And Drug Administration.

This product is not intended to diagnose, treat, cure, or prevent any disease.
The duodenum is the first portion of the small intestine, leading from the stomach. It contains the openings of the pancreatic and common bile ducts, secretes hormones which stimulate the pancreas and gall bladder to release enzymes and bile salts. Any imbalance between the production of acid-pepsin mixture and the production of the mucus can lead to inflammation of the lining of the duodenum causing ulceration. Duodenitis is the result, inflammation of the duodenum which in turn well cause the interference with proper digestion.

The glandular support of raw duodenum helps to maintain, strengthen, and reinforce the integrity of this very important organ.

These statements have not been evaluated by The Food And Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

---

One of the largest organs in the human body; it is located in the upper right abdomen, under the diaphragm and attached to it by ligaments. It is involved in many body processes, such as affording protection from disease, supplying sugar to meet the needs of muscle tissues, and regulating clotting of the blood. In addition, the liver possesses special power of regeneration. After being damaged, it can regenerate its own tissue almost immediately. The digestive process is closely related to the liver. Every vein from every part of the digestive tract empties into the liver through the portal vein. The proteins, sugars, and starches absorbed by the blood vessels of the stomach, by the small and large intestines and the pancreas are brought to the liver in the blood. These products result from the digestion of meats, starches, and sugars consumed as food. If the gland is impaired in these functions the overall well-being of the body will be influenced, as it lessened function will create a back-log of toxins and unexcreted waste which tend to poison body tissues. This then becomes the precipitant of many chronic degenerative and disabling diseases. The strategic location of the liver would compound any such toxicity of infection as it can easily spread to the duodenum, stomach, and other organs because of the open duct system. The liver in its complexity and amazing abilities influences a myriad of body functions. It takes sugar from the blood and stores it as glycogen, which is quickly converted back to sugar when it is needed by the body, especially the muscles. The liver produces urea, which is taken by the blood to the kidneys for excretion. The liver also forms fibrinogen and antithrombin, two substances essential to normal conditions in the blood and its clotting. Antithrombin prevents the constant disintegration of the white blood cells and prevents coagulation of the circulating blood. Vital biochemical activity of the liver is the formation of many antibodies the substance developed by the body to counteract invasive organisms and their toxins. These are some particular nutritional needs raw liver concentrates, full B-complex, inositol-choline, vitamin A, vitamin C, complete protein support, raw pituitary, raw thyroid, raw adrenal, raw kidney, raw spleen, raw gonad, raw thymus, and raw lymph.

**RAW BOVINE CARTILAGE**

UE 441  UPC 0 43292 55945

Serving Size: 1 Capsule  **Daily Value Not Established**

Amount Per Capsule  %DV

Raw Bovine Cartilage Tissue  750 mg.  **
Freeze dried, defatted, uncut, 100% pure and BSE FREE from New Zealand.

According to the latest statistics, over 50 million Americans suffer from some form of arthritis, either rheumatoid or osteoarthritis, as, as well as many other arthritic conditions. All forms of arthritis share common symptoms of moderate to serve pain and loss of range of motion. Bovine cartilage has some promising news for sufferers of this painful condition, it has been known to help rebuild collagen in certain individuals. Cartilage itself is a white semi-opaque connective tissue characterized by extreme smoothness, elasticity and toughness. It covers the end of the bones where they meet to become joints, circle discs of cartilage lie between each layer of bone in the spine, acting as cushions or shock absorbers. Cartilage covers the moveable joints of the legs, arms and fingers giving smoothness and resiliency to their movement. Since 1954 when bovine cartilage was discovered to promote wound healing it has been proven effective in treating a wide range of clinical conditions including inflammation. Bovine cartilage selectively stimulates the body's immune system and normalizes aberrant cells' Dr. John F. Prudden, M.D. Sc.D.

**RAW EYE**

UE 443  UPC 0 43292 56018

Serving Size: 1 Tablet  **Daily Value Not Established**

Amount Per Tablet  %DV

Raw Eye (bovine) Tissue  200 mg.  **
Freeze dried, defatted, uncut, 100% pure and BSE FREE from New Zealand.

The eye is a nearly perfect sphere and occupies the anterior part of the frontal cavity of the skull. It is made up of three concentric layers; the cornea, iris and the retina. It is one of the most adaptable organs and it’s distinctness varies individuals. It is the organ of sight. The entire eyeball is moved by a group of muscles attached on the outer surface. The curvature of the lens is changed by the ciliary muscle, while the pupil is dilated by the action of the dilator and constrictor fibers in the iris. We do not see with the eye, but the brain and the nervous system. Chief factors for seeing are the optic nerve and the brain's center for vision. The retina, part of the nervous system, serves to convey images to the optic nerve. The eye in its normal functioning has the ability to adapt itself to various conditions of light, overuse will exhaust this ability, and proper lighting is necessary to prevent the eye from becoming strained or fatigued. Each eye contains over a 100 million light receptors. During our waking hours they continually translate our surroundings to the brain in three dimension color. These four media are transparent, and as their optical densities are greater than air, the light on passing into the eye is refracted by the anterior surface of the cornea and by the anterior or posterior surfaces of the lens. When these media lose their transparency vision is damaged or destroyed altogether.

Raw Mammary
UE 445  UPC 0 43292 55957
Serving Size: 1 Tablet  ** Daily Value Not Established

Amount Per Tablet  %DV
Raw Mammary (bovine) Tissue  200 mg.  **
Freeze dried, defatted, uncut, 100% pure and BSE FREE from New Zealand.

The Mammary gland is the scientific name for the breast. They are composed of fatty tissue and glands capable of producing milk. The size and shape of the woman's breasts depend on fatty tissue rather than glands. It is not uncommon for one breast to be slightly larger than the other, but this difference in size is no indication that the breasts and their functioning are not normal. The hormone of the mammary glands has a decided action on the blood supply of the pelvic organs as well as neutralizing ovarian function. Lack of production of this hormone may result in profuse menstruation in young girls, and may also be contributory to periods lasting longer, or occurring too frequently, e.g. every two or three weeks. Some women, in an effort to preserve breasts from sagging, have been led to believe that special exercise or massage will correct this condition. There is no proven indication at this time that either exercise or massaging will have the desired effect. Sagging may be due to fluctuations in weight which have tendency to weaken the ligaments supporting the breasts. However there are those who believe that if the ligaments that support the breasts are weakened in some way, strengthening these ligaments through proper exercise will in effect correct as least to some degree the sagging.
